REQUEST FOR FILING RECEIPT CORRECTION

Hon. Commissioner of Patents and Trademarks,
Washington, D. C. 20231

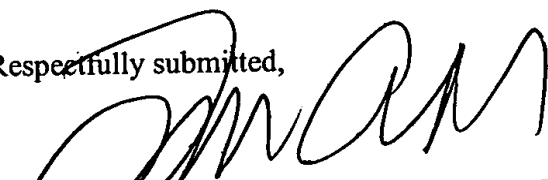

Sir:

Counsel has received the filing receipt for the above-identified application, a copy of which is enclosed.

The information listed under "Domestic Priority data as claimed by applicant" should be stricken off the record. A copy of page 1 of the specification is enclosed and it can be seen therefrom that no cross-reference to any related application was made.

Applicants respectfully request that the above information be corrected and that a new filing receipt be issued.

Respectfully submitted,

LAURENCE A. GREENBERG

Receipt is acknowledged of this nonprovisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

CIRCUIT CONFIGURATION FOR DRIVING A SEMICONDUCTOR SWITCHING ELEMENT AND METHOD FOR SAME

5

Background of the Invention:

Field of the Invention:

The invention lies in the field of semiconductor circuits.

The invention relates to a circuit configuration for driving a
10 semiconductor switching element, in particular, a
semiconductor switching element that is connected up in a
device for generating an ignition spark in an automobile.

Such a device for generating an ignition spark with a
15 semiconductor switching element is illustrated in FIG. 1. The
device has a transformer TR with a primary coil L1, a power
transistor T, and a spark plug Z. The power transistor T is
constructed, in particular, as an Insulated Gate Bipolar
Transistor (IGBT) or as a so-called power Darlington bipolar
20 stage and is connected in series with the primary coil L1
between two supply potentials V+, GND. The spark plug Z is
connected in series with the secondary coil L2 of the
transformer TR. Two diodes D1, D2 that are connected in
series between the collector terminal and the gate terminal of
25 the power transistor, configured as an IGBT in the example,
serve for limiting the collector-emitter voltage of the
